Summary of Report

1. This Report provides the Federal Communications Commission's recommended United States Proposals for the 1995 World Radiocommunication Conference (WRC-95). These recommended proposals seek to improve the international spectrum allocations and related measures necessary for the successful introduction of innovative global non-geostationary orbit communications satellite systems. These proposed actions will foster the implementation of Mobile-Satellite Service (MSS) networks and their inauguration of cost-efficient voice and data mobile communications services to all corners of the globe. These new satellite networks promise to spur multi-billion dollar U.S. industries and to form an integral segment of the Global Information Infrastructure. The Commission's recommended proposals are being transmitted to the Department of State for development of final United States Proposals.

2. WRC-95 will be the first conference under the International Telecommunication Union's new accelerated conference cycle to discuss substantive spectrum allocation and regulatory matters. This conference represents a significant opportunity to build a foundation for advancing near and long-term United States telecommunications goals. In particular, WRC-95 is critical to new commercial telecommunications industries—including the low-Earth orbit (LEO) MSS systems already licensed by the Commission.

3. To accomplish these aims, the Commission's primary recommended proposals for WRC-95 seek: (1) To designate spectrum for feeder links necessary to support MSS systems; (2) to reduce technical constraints on current global MSS spectrum allocations to make them usable for MSS operations; and (3) to obtain additional global spectrum allocations for MSS service links—including 6 MHz below 1
